

# ***Soldier Crew Tent*** ***(SCT)***

## ***Overview:***

The **Soldier Crew Tent (SCT)** was originally developed to provide environmental protection for the billeting of combat vehicle crews. The SCT's popularity is promoting a change in the authorization to include any unit in need of billeting of small unit elements. The SCT has recently completed initial fielding to combat, combat support and combat service support vehicle crews and has been designated as a Common Table of Allowances (CTA) item available for requisition using OMA funds to any unit in need.

## ***Description:***

The SCT is a lightweight, durable, single frame, single hub tent. The tent body is suspended from the frame in a canopy style. An over-cover lies on top of the frame to provide an air gap for added insulation. Two reversible over-covers are available in either a green/tan or green/white configuration. A cold weather cotton liner is also provided. The SCT is 53 inches high, weighs 75 pounds and fits up to 5 soldiers comfortably with 120 square feet floor space. Erect/strike is accomplished in less than 5 minutes.
